FIGURE 3.5: NUCLEAR POWER STATIONS

SWISS VOTE AGAINST NUCLEAR POWER

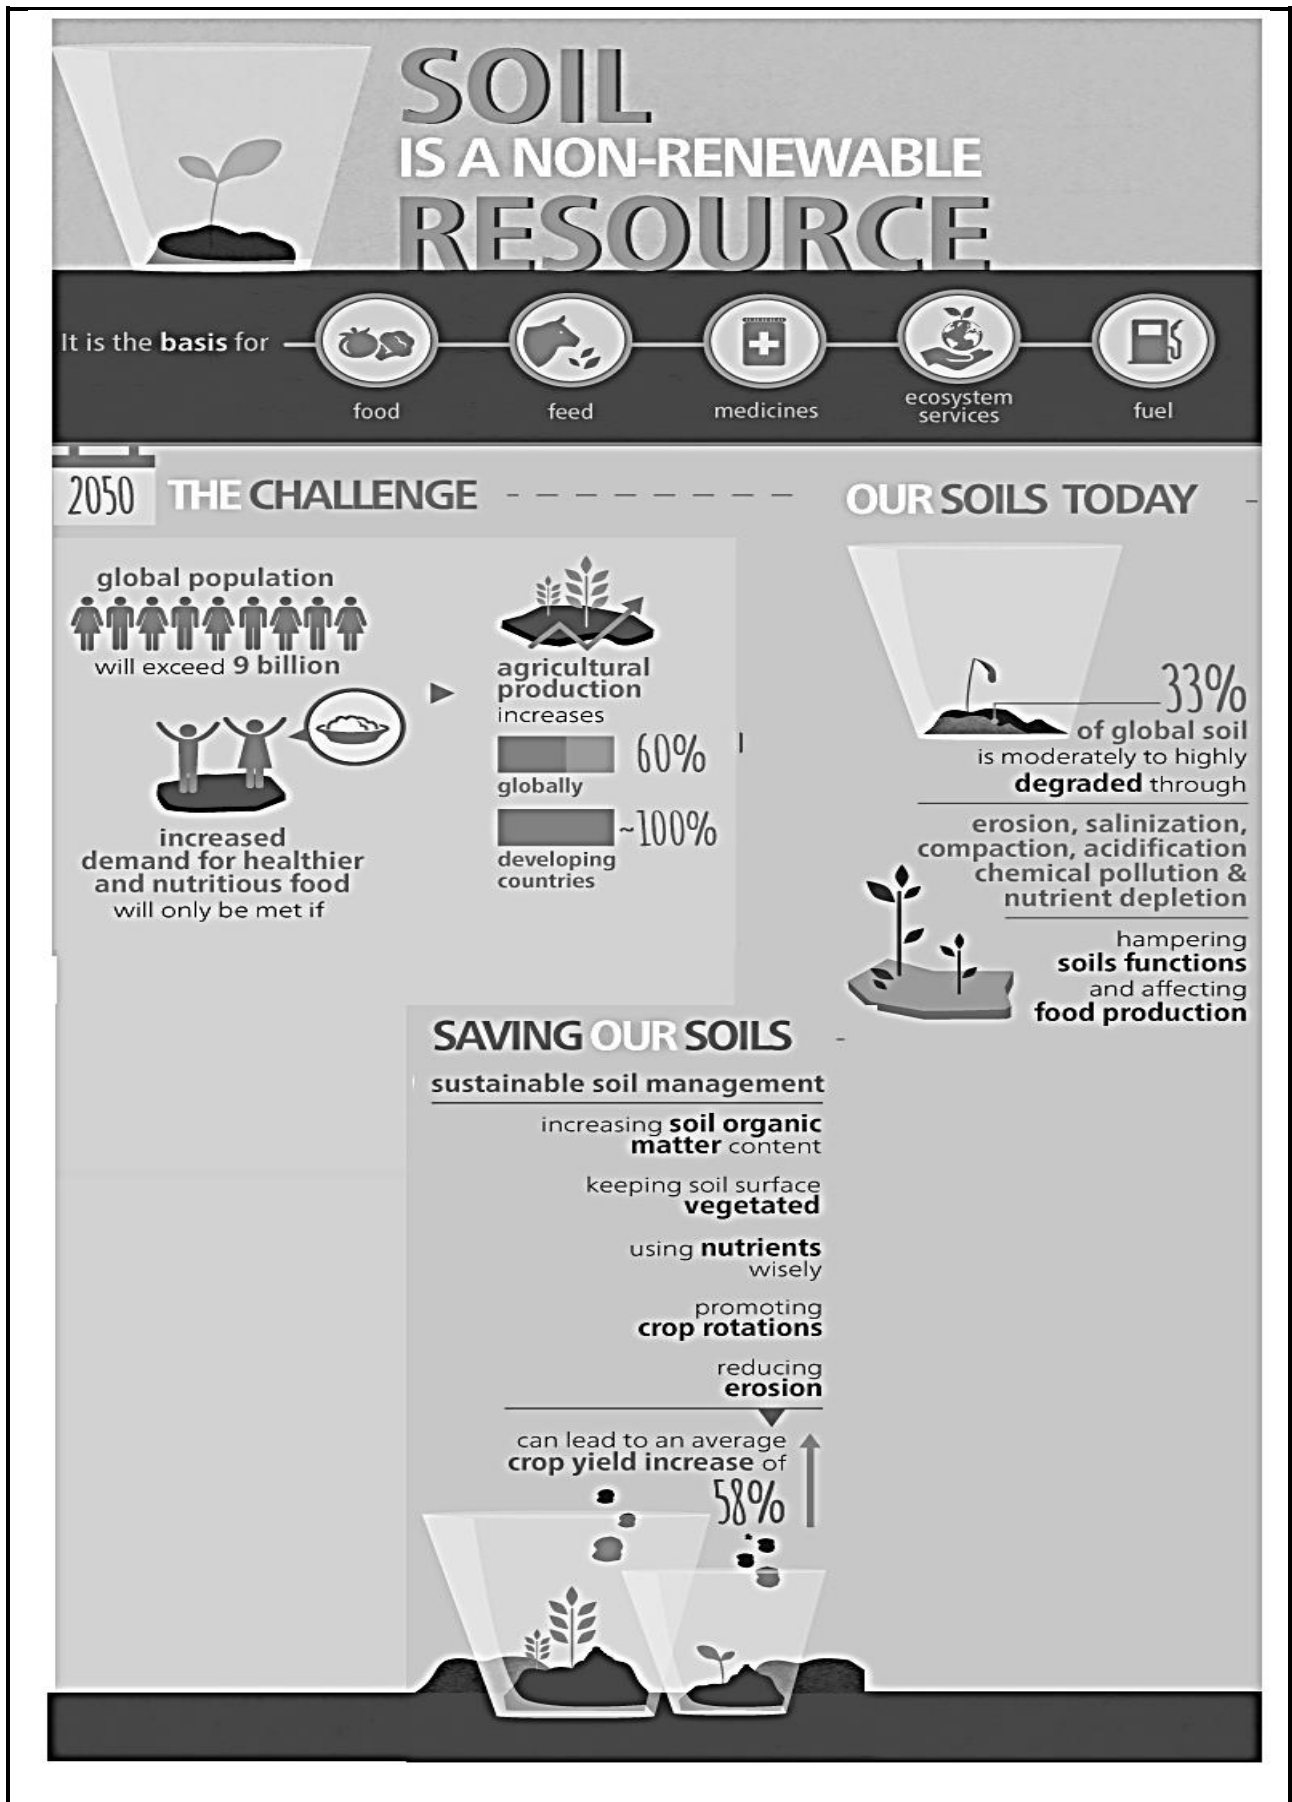

Swiss voters have voted overwhelmingly in favour of a policy proposal to phase out nuclear power. Preliminary results of their referendum suggest that voters are in favor of environmentally friendly electric power.

The Swiss government, after the nuclear disaster at Fukushima in Japan, indicated that they wanted to move away from nuclear power. There is no indication when the country's five nuclear power stations will be closed.

Nuclear power currently provides a third of the country's electricity. Solar, wind and hydro power stations are beginning to play a larger role in providing electricity.

FIGURE 4.4: EXPORT-LED GROWTH

Export-led growth is an economic strategy used by some developing countries. This strategy seeks to find a place in the world economy for a certain type of export. Industries producing this export may receive governmental subsidies and better access to the local markets. By implementing this strategy, countries hope to gain enough hard currency to import commodities manufactured more cheaply somewhere else.

There are essentially two types of exports used in this context: manufactured goods and raw materials.
